Climate Change

How Forestry can help save society

“In the long term, a sustainable forest management strategy aimed at maintaining or increasing forest carbon stocks, while producing an annual sustained yield of timber, fibre or energy from the forest, will generate the largest sustained mitigation benefit.”

– Intergovernmental Panel on Climate Change

Discussing global and regional forestry and timber trends and the implications and opportunities locally

Supper to follow

Karl Kny has been managing pine and eucalypt plantations and native forests for conservation across Victoria, Queensland and New Zealand for the past 18 years. With HVP Plantations he introduced internationally recognized Forest Stewardship certification (FSC) into Australia and has a passion for sustainability and land rehabilitation. For the past 30 years he and his wife Brigitte have been rehabilitating their property near Newham as a wildlife shelter, managing it for biodiversity, water quality and carbon sequestration.
