Understanding environmental history

- the key to a sustainable future

Lessons from Victoria's grassy ecosystems

Presented by **Paul Foreman**

Paul argues that only by developing a deeper understanding of how our landscapes work - in terms of diversity, function and history of change - can we be fully prepared for the future. And given recent shifts in government policy, local communities should seize the opportunity to be better prepared to lead the push to restore and protect their environment. Paul draws on examples from his consulting and research work in lowland grassy ecosystems, including important new understandings from the

Newham Hall

Friday March 27th
